Appendix

Contribution of Group members:

1. Yuanxin Tuo:

Project Design: Architect the project's overall structure.

Data Modeling: Process the Data, Lead the development of the algorithm/model that will power the recommendations.

Integration: Ensure all system components work seamlessly together.

2. Jiaming Ma

Data Cleaning: Handle the initial data cleaning process to ensure the dataset is ready for analysis.

Data Analysis: Conduct data analysis to inform the recommendation system's development and to derive insights for the presentation.

3. Haochen Shen

Data Collection: Assist in gathering and preprocessing data needed for the model.

Testing Support: Assist in the testing phase by running predefined tests, reporting issues, and suggesting improvements.

4. Zhenghao Wang

Testing & Optimization: Oversee the testing phase, adjusting the system for optimal performance.
